SUMMARY

Product designer with a computer science background and **5 years** designing AI and enterprise SaaS products. Designed **AI governance, access controls, and audit experiences** for a platform running **400M+ automations a year**, turning complex technical workflows into clear flows for admins, developers, and builders who do not code. Prototype with Claude Code, Cursor, and Figma Make. **MDes, Interaction Design, California College of the Arts.**

EXPERIENCE

Automation Anywhere | UX Designer

Mar 2021 – Jul 2025

Bangalore, India

- Founding designer on **AI Agent Studio**, taking it from 0 to 1, concept to general availability, in **3 months** and a launch on the **Imagine 2024 keynote stage**. Designed the prompt workbench and model connections so citizen developers could build with AI models without learning how to set them up.
- Shaped one workflow across **four personas**: admins who connect models, developers who write and test prompts, citizen developers who use them in automations, and governance teams who audit them. Partnered with product and engineering from first requirement to release.
- Designed the **AI governance layer** for customers running regulated work, where every AI response needs a record: role-based access controls over who can use each model and what gets logged, and **data masking** that hides personal, health, and payment data before a prompt reaches the model.
- Designed the **audit experience** for governance teams: a prompt log they can filter, open any session to review the prompt, response, and settings, then export it or send it to security monitoring tools. Added an admin dashboard showing which models are used, by which automations, and at what cost.
- Owned drag and drop automation actions for **Apple Keynote and Numbers** from scope to launch, so Mac users could automate their work without writing code. Made their workflows **35% more efficient** and set the pattern for adding new apps to the platform.
- Researched how developers build automations, the platform's core users, observing firsthand where they got stuck. Proposed new components for the **Rio design system** and prioritized with engineering: shipped the quick wins first and planned the larger changes to older input fields for a later release.
- Redesigned the **Community and University** learning experience, bringing five products under one navigation and replacing a course catalog with guided learning paths by role. **Certification completions rose 46%** and customer accounts on Mission Control, the automation planning tool, grew from **25 to 200+**.

PROJECTS

MarrowMatch | AI agent, side project, live

2025

- Built and launched an agent on Claude designed to educate potential bone marrow donors and grow NMDP's registry across the US. Carried it from systems research (causal loop mapping, service design) to a live conversational product. React, Vercel, GA4.

TAG | Service design, California College of the Arts

2026

- Designed a small device that clips onto an older adult's phone and points to where to tap, guiding without taking over. Covered research, service blueprint, and working prototypes, with a focus on scam protection and help that fades as confidence grows.

Aquasition | Card game, California College of the Arts

2026

- Designed and prototyped a fun water conservation card game in Figma. Won a Figma Config 2026 scholarship.

EDUCATION

California College of the Arts , San Francisco Master of Design, Interaction Design	Aug 2025 – Aug 2026
Indian School of Design & Innovation, with Parsons , Mumbai Post Graduate Diploma, Design & Innovation	Aug 2019 – Jul 2020
Mody University of Science and Technology , Rajasthan Bachelor of Technology (B.Tech), Computer Science	Aug 2015 – May 2019

AWARDS AND RECOGNITION

Figma Config Scholarship , for Aquasition	2026
Global Grad Show, Dubai Design Week , for DISHA, a patch that guides patients through hospitals	2020

PUBLICATION

WhatsApp End-to-End Encryption (co-author) 3rd International Conference on Computing: Communication, Networks and Security (IC3NS 2018), published in IJFRCSCE, Vol. 4, Issue 3	Mar 2018
Explained how WhatsApp secures messages, media, and calls with the Signal Protocol, and its limits.	

CERTIFICATIONS

Certified Usability Analyst (CUA) , Human Factors International	2021
Product Analysis , Pendo	2024

SKILLS

Product design: 0 to 1 product design, end-to-end design, human-centered design, interaction design, design systems, prototyping, information architecture

AI and enterprise: Generative AI and LLM product design, agentic workflows, AI governance (role-based access control, permissions, audit trails, data masking), admin experiences, data-rich dashboards

Strategy and collaboration: UX strategy, cross-functional collaboration, stakeholder management, design storytelling, presenting design work, building consensus

Research: User research, qualitative and quantitative research, contextual inquiry, user interviews, usability testing, heuristic evaluation, competitive analysis, journey mapping, service design, product analytics

Tools and build: Figma, Figma Make, Framer, Claude Code, Cursor, Miro, Jira, React, HTML, CSS, Git
